# SANER CLOUD

**AI-powered CNAPP Suite for  
unified visibility, compliance,  
and remediation**

Saner Cloud CNAPP to unify asset discovery, posture monitoring, anomaly detection, identity governance, and automated remediation in one dashboard.

# SILOED TOOLS LEAD TO WIDER GAPS

When cloud security relies on disconnected tools, visibility cracks, and policies drift. The space between finding, prioritizing, and fixing issues widens, which attackers exploit. The result is higher risk, more manual work, and unclear ownership across teams.

## Offer limited visibility and leave blind spots

Multi-cloud sprawl, outdated resources, shadow IT, and disconnected logs make assets and configs hard to discover and track.

## Rely on Static Compliance Checks without Anomaly Detection

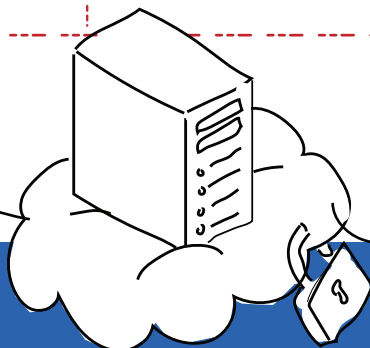

Periodic scans miss configuration drift, unusual access patterns, and risky exposures across cloud services.

## Lack integrated remediation, delaying fixes

Multiple tools, ticket-only workflows, and no in-platform or API-level actions force manual handoffs, fragment ownership, and stretch MTR.

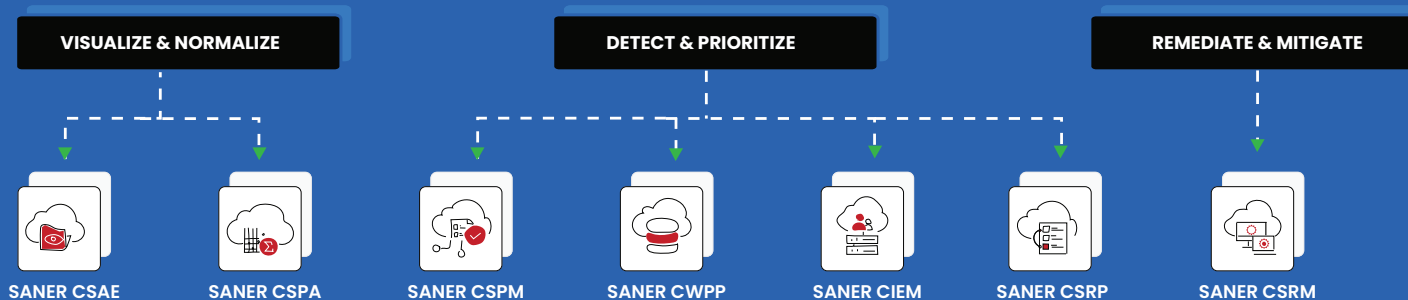

## Struggle with Identity Sprawl and Excessive Entitlements

Unused accounts and wide-open roles accumulate, creating easy paths for misuse.

## THE SANER CLOUD DIFFERENCE

Saner Cloud combines seven powerful modules under a single umbrella to provide unified, automated, and continuous cloud security for your infrastructure. Saner Cloud, built on SecPod's prevention platform, detects risks and ensures that they are remediated with a natively integrated remediation engine for effective security posture.

### SANER CSAE

#### Cloud Security Asset Exposure

Maps every resource across hybrid and multi-cloud into one view, so you can see assets, services, and where they live across AWS and Azure

### SANER CSPA

#### Cloud Security Posture Anomalies

Highlights deviations and posture anomalies so unusual patterns don't hide in the noise

### SANER CSPM

#### Cloud Security Posture Management

Checks cloud configs against industry benchmarks, tracks posture, and keeps configurations aligned with policy

### SANER CIEM

#### Cloud Infrastructure Entitlement Management

Shows who has access to what, across users, groups, roles, and policies, helping prevent privilege misuse.

### SANER CSRP

#### Cloud Security Risk Prioritization

Applies CISA-SSVC decisioning to rank risks into clear actions (Act, Attend, Track, Track\*), focusing teams on what matters first

### SANER CWPP

#### Cloud Workload Protection Platform

Safeguards applications and resources running in your cloud environments through continuous scanning

### SANER CSRM

#### Cloud Security Remediation Management

Automates fixes with approvals and one-click actions, so detected issues get resolved faster

# WHY CHOOSE SANER CLOUD?

Unified dashboard with real-time updates and interactive visuals for a single source of truth

Complete asset visibility with watchlists, exposure detection, region-based categorization, deprecated services, and cost analysis

AI-driven anomaly detection with confidence levels, severity distribution, whitelisting options, and one-click remediation

Continuous posture management with built-in benchmarks, quick misconfiguration checks, trend tracking, and drift detection

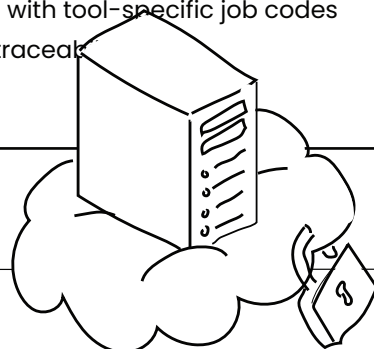

Risk prioritization with scoring, top-risk lists, and context across assets, posture, and anomalies to focus on which risk to remediate first

Identity and entitlement governance with policy maps, RBAC, resource groups, excessive permission detection, and activity logging

Enhanced Remediation with scheduling and approval workflows, Top 10 patches, patch aging, most-impactful-patches charts, and grouped remediation

Multi-cloud coverage across AWS and Azure with a prevention-first workflow

Smart tagging for fast filtering across thousands of resources and audit logs with tool-specific job codes for full traceability

SecPod is a leading cyber security technology company committed to preventing cyberattacks through proactive security. Its mission is to secure computing infrastructure by enabling preventive security posture.

At the core of SecPod's offerings is the Saner Platform - a suite of solutions that help organizations establish a strong security posture to preempt cyber threats against endpoints, servers, network and cloud infrastructure, as well as cloud workloads. With its cutting-edge and comprehensive solutions, SecPod empowers organizations to stay ahead of evolving threats and build a resilient security framework.

## Our Clients and Reach

SecPod is trusted by enterprises and MSPs across Finance, Healthcare, IT, Government, and Manufacturing operating across 100+ countries.

*Experience preventive, automated, and intelligent security.*
